CURIUM™
LIFE FORWARD

The challenge

Curium Pharma manufactures and delivers radiopharmaceutical products for use in diagnostic imaging and therapy. With operations spanning highly regulated markets, the company needed to manage data privacy with precision. Existing tools lacked the flexibility to support urgent needs around incident response and data mapping. Curium sought a solution that could handle immediate priorities while supporting future expansion of their compliance program.

The solution

Responsum was selected to roll out Curium's incident management and data mapping processes. The platform allowed the team to act quickly while maintaining full oversight of sensitive data flows and risk areas.

Through guided modules, Curium gained structured, easy-to-navigate documentation and improved internal coordination around incidents and compliance responsibilities.

Real-world impact

Responsum helped Curium set up a privacy foundation that works for both short-term priorities and long-term needs. *"Responsum team supported in a swift and efficient way with the implementation of both Incidents and Data Mapping modules,"* says Eva Zarnari, Paralegal at Curium Pharma.

"It allowed us to prioritize immediate requirements and seamlessly build towards a broader compliance framework."

The platform's structure helped reduce manual effort and improved clarity across functions involved in privacy and security.

Overall experience

Curium experienced fast onboarding and strong support from Responsum's team.

"The implementation was smooth and aligned with our compliance objectives," Zarnari adds. The focus on immediate value combined with scalability gave the company confidence to grow its program with Responsum as a long-term partner.

Why Responsum?

Curium Pharma chose Responsum because of its:

- **Fast setup** of critical privacy modules
- **Structured incident and data flow documentation**
- **Scalable framework** that adapts to future needs
- **Efficient, responsive support** throughout implementation

"Responsum team supported in a swift and efficient way with the implementation of both Incidents and Data Mapping modules, allowing us to prioritize immediate requirements and seamlessly build towards a broader compliance framework."
